

Service - Kitting & Assembly

Copper State offers quality and versatile kitting, packaging, and product assembly services to simplify the way you manage your bill of materials and to meet your production or maintenance needs.

Our custom kits are the best fit for you!

Our full-time production staff manages the bill of materials (BOM), capacity planning, production scheduling, quality control, and of course, material production. Our staff in other markets are dedicated to handling unique specialty kits and larger industry kits with the same production handling as our kitting facility.

We package our products and kits in a variety of shapes, types, and sizes to fit your needs. Some of our materials include boxes, bags, biodegradable poly material, totes, pallets, and reusable bins for lean manufacturing lines. We offer various packaging and kitting quantity options, customer specific labeling, and color coding solutions.

Big or small? We package it all!

Our facility is equipped to manage production lines of between 500 and 1,000 different customer kits simultaneously. We manage all types of inventory from raw parts, fasteners, and customer specific items to the light assembly of fasteners and customer owned inventory.

Copper State Bolt & Nut Co.

Copper State supplies custom kitting, packaging, and assembly services to a range of customers and industries. These specialty services can often be bundled with our VMI services, providing absolute confidence that your production line, maintenance facility, or repair operation has everything you need. We also support lean manufacturing and environmentally sustainable packaging materials with an outstanding production team.
