Supplier Practices to Meet Environmental Compliance Standards

Copper State Bolt & Nut Co. hereby provides the following information to our valued customers regarding our approach to environmental compliance and product stewardship, including directives such as RoHS (Restriction of Hazardous Substances), WEEE (Waste Electrical and Electronic Equipment), ELV (End-of-Life Vehicles), Substances of Concern (SOC), and other applicable regulatory frameworks.

As a matter of standard business practice, Copper State establishes and maintains relationships with its supplier base to ensure product quality, adherence to applicable standards and specifications, reliable service, and competitive pricing. These relationships are supported through ongoing supplier engagement, including reasonable inquiry, supplier certifications, and documentation review processes to confirm alignment with customer requirements and applicable environmental regulations.

Products distributed or manufactured by Copper State are sourced and/or produced in accordance with applicable commercial standards and customer-specific requirements. Our ability to meet environmental compliance obligations is supported through structured supplier due diligence processes, including the collection of relevant documentation such as supplier declarations, Safety Data Sheets (SDS), and material disclosures where applicable. These processes are designed to align with recognized industry practices and evolving regulatory expectations.

For customers requiring specific compliance to environmental standards—including but not limited to RoHS, WEEE, ELV, SOC, REACH (SVHC requirements), TSCA, PFAS-related regulations, POPs, and other applicable frameworks—such requirements must be clearly communicated through purchase orders or requests for quotation. In response, Copper State will source materials from suppliers who have provided documented evidence of conformance, including certifications or declarations aligned with the requested standard.

Where required, Copper State can provide supporting documentation, including supplier certifications or compliance statements, on an item-by-item basis. These materials are subject to internal review processes to ensure consistency with supplier-provided information and customer specifications.

Copper State recognizes the increasing global focus on product content transparency, material traceability, and regulatory compliance across supply chains. We are actively monitoring evolving regulatory developments, including emerging requirements related to PFAS restrictions, REACH updates, and U.S. federal and state-level chemical regulations. Our approach reflects a commitment to continuous improvement, supplier engagement, and alignment with industry frameworks and customer expectations.

We value the continued partnership of our customers and suppliers and remain committed to supporting evolving compliance requirements through practical, responsive, and transparent processes. For additional information or to discuss specific compliance needs, please contact our Director of Quality – Steve Turner at sturner@copperstate.com.
